

# NGUYEN VAN HUNG

## FRONTEND DEVELOPER

✉ vanhungnguyenbku@gmail.com ☎ (+84) 332 305 444 📍 Ho Chi Minh, Vietnam

🌐 [linkedin.com/in/ng-van-hung](https://www.linkedin.com/in/ng-van-hung)

## SUMMARY

---

Frontend Developer with 5+ years of experience in React.js and Next.js, building scalable and high-performance web applications. Strong in UI architecture, performance optimization, and handling complex business logic in production systems.

## EDUCATION

---

### Ho Chi Minh City University of Technology

08/2015 – 04/2020

*Bachelor of Engineering in Electronics and Telecommunications*

## SKILLS

---

**Languages:** React.js, Next.js, TypeScript, JavaScript, Vue.js, React Native

**Styling/UI:** Tailwind CSS, Material UI, Ant Design, Bootstrap, SASS

**Tool & Environment:** Git, Docker, Linux, macOS, draw.io, Notion.

**State Management:** Redux, Zustand

## PROFESSIONAL EXPERIENCE

---

### Fullstack Developer

05/2024 – Present

*Anrakutei Vietnam*

- Built ordering and scheduling systems using React.js, TypeScript, and Redux
- Implemented complex business logic with multi-level state management, validation, and real-time constraint handling
- Designed data transformation between frontend state and backend APIs to ensure consistency
- Optimized frontend performance for high-interaction UI, improving responsiveness and reducing re-renders

### Frontend Developer

09/2020 – 04/2024

*Upgo Solutions*

- Developed responsive web interfaces using React.js, ensuring compatibility across devices and browsers
- Built and maintained admin dashboard features for internal products
- Integrated APIs and handled data flow between frontend and backend systems
- Fixed bugs and improved existing features to enhance system stability
- Worked with team members to deliver features and maintain code quality

## PROJECTS

---

### Tablet Ordering System

*A tablet-based ordering system for restaurant customers, supporting dynamic menu configuration and complex ordering flows.*

- Developed multi-level menu configuration and ordering flows using React.js, TypeScript, and Redux
- Implemented complex validation and business logic for ordering system
- Integrated cart state with backend APIs to ensure data consistency

- Improved UI performance in high-interaction scenarios

### **Staff Scheduling System (In-Store HR Management)**

*A web-based staff scheduling system enabling managers to assign employees to shifts with drag-and-drop interactions and real-time business rule validation.*

- Built drag-and-drop scheduling board using React.js and TypeScript with complex business rule enforcement
- Implemented validation logic for staff assignment, including role constraints, working-hour limits, and conflict prevention
- Designed data transformation between API responses and hierarchical scheduling structures
- Optimized performance for heavy UI interactions by minimizing re-renders and improving data handling

### **Anrakutei Mobile App (Loyalty & Check-in System)**

*A mobile application supporting customer authentication, reward systems, QR check-in, and real-time notifications with offline capabilities.*

- Built complex state-driven features including stamp card rewards, animations, and notification handling
- Developed QR code check-in flow with geolocation validation and duplicate scan prevention
- Designed data fetching and API integration patterns with token management and error handling
- Improved app reliability by handling async state, race conditions, and offline data storage

### **SMS Management System**

*A web-based system for managing master data, exporting reports, and executing batch data operations with validation and type-safe API integration.*

- Built dynamic form-based UIs for master data management with batch create, update, and delete operations
- Implemented schema-based validation and form state management using React Hook Form and Zod
- Designed data transformation and API integration with type-safe validation and consistent data mapping
- Developed export and data processing workflows with configurable parameters and file generation
- Optimized performance for large datasets using memoization and efficient state handling

## **ADDITIONAL INFORMATION**

---

### **AI-assisted Development**

Claude Code, ChatGPT (code generation, debugging, refactoring support)

### **English:**

Reading proficiency (technical documentation)
